SKILLS

- **Languages:** Python, Java, SQL, HTML, CSS
- **Tools & Platforms:** FastAPI, Flask, Streamlit, Git, GitHub, Docker, Google Colab, AWS, Azure
- **AI/ML & Databases:** Pandas, NumPy, Scikit-learn, ChromaDB, PostgreSQL, PyMuPDF, RAG, EDA
- **Soft Skills:** Problem Solving, Team Collaboration, Adaptability, Quick Learner

INTERNSHIP

Futureense Technologies | *Machine Learning Intern*

Jun' 26 –Jul' 26

- Built IntelliDocs-AI, an AI-powered RAG platform using Python, FastAPI, React, and Streamlit for automated document processing, semantic chunking, and vector indexing across multiple file formats.
- Developed a hybrid retrieval pipeline using ChromaDB, BM25, and RRF with Google Gemini to deliver relevant search, citation-backed answers, and multi-document analysis.
- Deployed the application on Vercel and Render with scalable REST APIs and multi-model fallback for reliable document intelligence.
- Tech Stack: Python, FastAPI, React, Streamlit, ChromaDB, BM25, Google Gemini, REST APIs, Vercel, Render.

PROJECTS

RevenueShield

Sep' 26

- Built a full-stack SaaS dashboard for detecting, analyzing, and recovering failed payment transactions, featuring real-time KPIs, interactive charts, and multi-tenant support.
- Integrated Claude AI as an AI Copilot for revenue insights and smart payment recovery recommendations.
- Developed a payment failure simulator and transaction explorer with filterable recovery pipelines, anomaly detection, role-based access control (RBAC), and compliance audit logging
- Tech Stack: Next.js 14, TypeScript, Tailwind CSS, Prisma ORM, PostgreSQL, FastAPI, JWT, Vercel.

Virtual Memory Management Simulator

Apr' 26

- Developed an interactive simulator for Paging and Segmentation, implementing FIFO, LRU, and Optimal page replacement algorithms with step-by-step memory visualization.
- Implemented demand paging, Belady's Anomaly detection, address translation, memory compaction, and real-time fragmentation analysis.
- Integrated live Windows process telemetry using PowerShell to generate realistic memory simulations and built REST APIs using Flask.
- Tech Stack: Python, Flask, HTML5, CSS, JavaScript, Chart.js, PowerShell, Pytest.

Student Performance Tracker

Dec' 25

- Developed a full-stack application to manage, analyze, and visualize student academic performance data.
- Implemented RESTful CRUD APIs with database integration, JWT authentication, filtering, querying, error handling, and interactive performance dashboards.
- Built a complete student performance tracking system with real-time data visualization and insights through interactive charts and filters.
- Tech Stack: Python, FastAPI, SQLAlchemy, PostgreSQL, Pydantic, Plotly Dash, Plotly Express

CERTIFICATES

Database Management System Part – 1 | [Infosys](#)

Jul'26

Java Programming Fundamentals | [Infosys](#)

Aug'25

Responsive Web Design | [freeCodeCamp](#)

Nov'24

ACHIEVEMENTS

- Solved 100+ Analytical Aptitude and Quantitative reasoning problems across interview preparation platforms, strengthening logical and Problem-Solving skills.

EDUCATION

Lovely Professional University
Bachelor of Technology
Computer Science and Engineering; CGPA: 7.90

Phagwara, Punjab
Aug' 24 – Present

+2 High School
Intermediate
PCM; Percentage: 85

Buxar, Bihar
Mar'21 – May' 23
